

AEGIS Agile SIM

A patented system that radically improves access to cellular networks.

At its core, it manages the technical relationship between the SIM and the device radio system by enhancing traditional eSIM technology.

AEGIS-SIMs include:

- Access to 650 cellular networks and works in over 180 countries
- Selects the strongest cell tower to connect with, regardless of network operator
- Low cost roaming as the most cost effective IMSI profile is elected
- Enables devices to obfuscate by IMSI flushing and network hopping
- Single data pool used across all of a client's SIMs, minimising administration
- Stores up to 10 IMSI profiles, replicable over the air
- Hardware agnostic

All devices and AEGIS-SIMs can draw data from the same pool minimising administration. An alert can be set where the user gets a reminder when their data pool drops below a set level.

AEGIS-SIMs

10 OTA replaceable IMSIs

- ✓ Connects to any network
- ✓ Selects the strongest cell tower to connect on
- ✓ Registers as a local SIM when roaming
- ✓ IMSIs can be 'flushed' and replaced Over The Air
- ✓ Reduced roaming costs
- ✓ Organisations have a pool of data for all devices, saving management time and costs

Standard SIM

Single IMSI configuration

- ✗ Only works on a single network
- ✗ No connection if the network does not have an available cell tower
- ✗ Registered as an international SIM when roaming
- ✗ Higher roaming costs

AEGIS Agile SIM
